

There are diseases so deadly they may kill  
over half the flock & spread rapidly.  
Dear Mr. Jaffe: under crowded conditions. The  
bird which has access to sunlight is 'Malthusian'

I am requesting that the FDA ban the practice of 'forced molting' in 'laying' birds  
because it is done to profit the egg industry and is of no benefit to the birds what-  
soever. Scientific studies show that the stress of this practice results in an increase  
in intestinal *Salmonella* and the transmission of the organism to uninfected hens.  
Additionally, because these birds are intentionally starved, they consume contami-  
nated feathers in an effort to reduce their hunger. Protect the birds and consumers,  
not egg industry profits.

Sincerely,

Disease can spread quickly under  
crowded conditions. They  
deadly diseases can kill half  
the flock. A bird in penlight is  
healthier. Vrt. is.

PLACE  
STAMP

Rockville MD 20857

P.S. No  
diseased egg  
please

Docket Number 98P-0203/CP 1

But we do not want to  
let sick birds. Do you?

Scenlight does  
not cause cancer  
if a sick  
bird is a  
bird is a  
virus is  
not observed  
than penlight  
will help fight  
it.
